

To: Dr. Eric Valette - CEO Planet Horizons Technologies SA

Dear Eric,

Re.: Aqua-4D Water Systems

I would hereby like to express my appreciation on our collaboration on the successful installation of the Aqua-4D systems in our melons and watermelons farms.

Thanks to Aqua-4D, we have witnessed an increase in overall quality of the produced fruits as well as a higher quantity per square meter while irrigating with high conductivity water (up to EC6).

These systems have increased our overall yields (up to 20%) as well as the percentage of export quality of the melons in zones irrigated with brackish water. We appreciate the fact that the water treated by Aqua-4D is improving the root development. It also allows a global better sustainability of our fields in this arid region.

The very quick Return on Investment as well as the fact that we have practically no maintenance cost convinced us to equip our farms with your systems. We will implement them on other fruits and vegetables varieties too.

I would also like to thank your team for the great service conveyed to us. I can only recommend this water treatment system to other farmers. For us, it was a great move.
